

Here present full game step by step game interface screenshots and the test area evidence

Testing area evidence

Testing means checking whether the game/prototype works, whether users can understand it, whether feedback is clear, and whether the cyber-safety lesson is delivered. You do not test only by saying "it works". You must record what was tested, what failed, what was fixed, and what still needs improvement.

Test area	What to test	Evidence required
Start/opening test	Does the game open/start correctly?	 Yes it works properly
Navigation/flow test	Can the user move through the intended journey?	 After click in start button, it going another step-  Like that we can run the game Yes, the user can move through the intended journey
Interaction test	Do buttons, choices, sprites, links, or answers work?	Yes , its works properly.

Feedback test	Does the game explain correct/wrong answers clearly?	 Yes, its explain answer correctly and clearly
Learning test	Can the tester identify the cyber-safety lesson?	Peer testing notes
Accessibility test	Is text readable, buttons visible, instructions clear, and design suitable for the target audience?	 yes, it is working and suitable for target audience
Bug test	What does not work yet?	bug-fix-log.md

- Step8

- Step9

- Step 10

- Step 11

- Step 12

What will you do?

✗ WRONG CHOICE (-15 pts)

You fell for the phishing scam.

Red flags: Suspicious sender address (not a real Coventry University domain), urgent/threatening language ("immediately"), and a fake link.

Learning tip: Never click links in urgent assignment emails.

What happened: The link led to a fake Turnitin page that stole your university login credentials.

- Step 13

What will you do?

⚠ RISKY CHOICE (-5 pts) – Risky

Replying confirms your phone number is active.

Red flags: Unsolicited SMS about tuition fee refund.

Learning tip: Never respond to unexpected banking or fee messages.

What happened: Scammers now know your number is active for future phishing attempts.
